## INOVANCE

## MD800 Series AC Drive (Multidrive System)

Quick Installation and Commissioning Guide

## Preface

## Introduction

The MD800 series AC drive is a new generation of standard AC drive (multidrive system) designed for low-power and multidrive applications in the traditional OEM industry. It is widely applied in industries such as printing and packaging, woodworking machine tools, food and beverage, logistics and warehousing, textile printing and dyeing, fans and pumps.

This guide describes the installation, wiring, quick commissioning, commissioning parameters, and troubleshooting of the MD800 series product.

## More Documents

| Document Name | Description |
| :--- | :--- |
|  | Describes the system composition, technical <br> specifications, and dimensions of the AC drive, <br> Mp800 Series AC Drive (Multidrive <br> specic specifications and selection of options <br> (including installation accessories, cables, and <br> Guide |
| peripheral electrical components), common EMC |  |
| problems and solutions, and certifications and |  |
| standards. |  |,

## Revision History

| Date | Version | Description |
| :--- | :--- | :--- |
| March 2021 | A00 | First release |
| July 2021 | A01 | Modified for version consistency. |
| November 2021 | A02 | Modified the fault codes and <br> commissioning parameters. |

## Document Acquisition

This guide is not delivered with the AC drive. You can obtain the PDF version of this document using the following method:

Log in to Inovance's website (http://en.inovance.cn/), choose Support > Download, perform keyword search, and download the PDF file.

Appendix Electrical Wiring ..... 126

## Fundamental Safety Instructions

## Safety Precautions

1. This chapter presents essential safety instructions for a proper use of the equipment. Before operating the equipment, read through the guide and comprehend all the safety instructions. Failure to comply with the safety instructions may result in death, severe personal injuries, or equipment damage.
2. "CAUTION", "WARNING", and "DANGER" items in the guide only indicate some of the precautions that need to be followed; they just supplement the safety precautions.
3. Use this equipment according to the designated environment requirements. Damage caused by improper use is not covered by warranty.
4. Inovance shall take no responsibility for any personal injuries or property damage caused by improper use.

## Safety Levels and Definitions

Indicates that failure to comply with the notice will result in death or severe personal injuries.

Indicates that failure to comply with the notice may result in death or severe personal injuries.

Indicates that failure to comply with the notice may result in minor or moderate personal injuries or equipment damage.

## General Safety Instructions

- Drawings in the guide are sometimes shown without covers or protective guards. Remember to install the covers or protective guards as specified first, and then perform operations in accordance with the instructions.
- The drawings in the guide are shown for illustration only and may be different from the product you purchased.

## Unpacking

## WARNING

Do not install the equipment if you find damage, rust, or signs of use on the equipment or accessories upon unpacking.

- Do not install the equipment if you find water seepage or missing or damaged components upon unpacking.
- Do not install the equipment if you find the packing list does not conform to the equipment you received.

## CAUTION

Check whether the packing is intact and whether there is damage, water seepage, dampness, and deformation before unpacking.

- Unpack the package by following the unpacking sequence. Do not strike the package violently.
- Check whether there is damage, rust, or injuries on the surface of the equipment and equipment accessories before unpacking.
- Check whether the package contents are consistent with the packing list before unpacking.

## Storage and Transportation

## WARNING

- Large-scale or heavy equipment must be transported by qualified professionals using specialized hoisting equipment. Failure to comply may result in personal injuries or equipment damage.
- Before hoisting the equipment, ensure the equipment components such as the front cover and terminal blocks are secured firmly with screws. Loosely-connected components may fall off and result in personal injuries or equipment damage.
- Never stand or stay below the equipment when the equipment is being hoisted by the hoisting equipment.
- When hoisting the equipment with a steel rope, ensure the equipment is hoisted at a constant speed without suffering from vibration or shock. Do not turn the equipment over or let the equipment stay hanging in the air. Failure to comply may result in personal injuries or equipment damage.

## A CAUTION

- Handle the equipment with care during transportation and mind your steps to prevent personal injuries or equipment damage.
- When carrying the equipment with bare hands, hold the equipment casing firmly with care to prevent parts from falling. Failure to comply may result in personal injuries.
- Store and transport the equipment based on the storage and transportation requirements. Failure to comply will result in equipment damage.
- Avoid storing or transporting the equipment in environments with water splash, rain, direct sunlight, strong electric field, strong magnetic field, and strong vibration.
- Avoid storing the equipment for more than three months. Long-term storage requires stricter protection and necessary inspections.
- Pack the equipment strictly before transportation. Use a sealed box for long-distance transportation.
- Never transport the equipment with other equipment or materials that may harm or have negative impacts on this equipment.

## Installation

DANGER

- The equipment must be operated only by professionals with electrical knowledge.

## ! WARNING

Read through the guide and safety instructions before installation.

- Do not install this equipment in places with strong electric or magnetic fields.
- Before installation, check that the mechanical strength of the installation site can bear the weight of the equipment. Failure to comply will result in mechanical hazards.
- Do not wear loose clothes or accessories during installation. Failure to comply may result in an electric shock.
- When installing the equipment in a closed environment (such as a cabinet or casing), use a cooling device (such as a fan or air conditioner) to cool the environment down to the required temperature. Failure to comply may result in equipment over-temperature or a fire.
- Do not retrofit the equipment.
- Do not fiddle with the bolts used to fix equipment components or the bolts marked in red.
- When the equipment is installed in a cabinet or final assembly, a fireproof enclosure providing both electrical and mechanical protections must be provided. The IP rating must meet IEC standards and local laws and regulations.
- Before installing devices with strong electromagnetic interference, such as a transformer, install a shielding device for the equipment to prevent malfunction.
- Install the equipment onto an incombustible object such as a metal. Keep the equipment away from combustible objects. Failure to comply will result in a fire.

## A CAUTION

Cover the top of the equipment with a piece of cloth or paper during installation. This is to prevent unwanted objects such as metal chippings, oil, and water from falling into the equipment and causing faults. After installation, remove the cloth or paper on the top of the equipment to prevent over-temperature caused by poor ventilation due to blocked ventilation holes.
Resonance may occur when the equipment operating at a constant speed executes variable speed operations. In this case, install the vibration-proof rubber under the motor frame or use the vibration suppression function to reduce resonance.

## Wiring

DANGER

- Equipment installation, wiring, maintenance, inspection, or parts replacement must be performed only by professionals.
- Before wiring, cut off all the power supplies of the equipment, and wait for at least the time designated on the equipment warning label before further operations because residual voltage still exists after power-off. After waiting for the designated time, measure the $D C$ voltage in the main circuit to ensure the $D C$ voltage is within the safe voltage range. Failure to comply will result in an electric shock.
- Do not perform wiring, remove the equipment cover, or touch the circuit board with power ON. Failure to comply will result in an electric shock.
- Check that the equipment is grounded properly. Failure to comply will result in an electric shock.

Do not connect the input power supply to the output end of the equipment. Failure to comply will result in equipment damage or even a fire.

- When connecting a drive to the motor, check that the phase sequences of the drive and motor terminals are consistent to prevent reverse motor rotation.
- Cables used for wiring must meet cross sectional area and shielding requirements. The shield of the cable must be reliably grounded at one end.
- Fix the terminal screws with the tightening torque specified in the guide. Improper tightening torque may overheat or damage the connecting part, resulting in a fire.
- After wiring is done, check that all cables are connected properly, with no screws, washers, or exposed cables left inside the equipment. Failure to comply may result in an electric shock or equipment damage.

## A. CAUTION

During wiring, follow the proper electrostatic discharge (ESD) procedure, and wear an antistatic wrist strap. Failure to comply will damage the equipment or the internal circuits of the equipment.

- Use shielded twisted pairs for the control circuit. Connect the shield to the grounding terminal of the equipment for grounding purpose. Failure to comply will result in equipment malfunction.

## Power-on

## DANGER

- Before power-on, check that the equipment is installed properly with reliable wiring and the motor can be restarted.
- Check that the power supply meets equipment requirements before power-on to prevent equipment damage or a fire.
- After power-on, do not open the cabinet door or protective cover of the equipment, touch any terminal, or disassemble any unit or component of the equipment. Failure to comply will result in an electric shock.

WARNING

- Perform a trial run after wiring and parameter setting to ensure the equipment operates safely. Failure to comply may result in personal injuries or equipment damage.
- Before power-on, check that the rated voltage of the equipment is consistent with that of the power supply. Failure to comply may result in a fire.
- Before power-on, check that no one is near the equipment, motor, or machine. Failure to comply may result in death or personal injuries.

## Operation

## DANGER

- The equipment must be operated only by professionals. Failure to comply will result in death or personal injuries.
- Do not touch any connecting terminals or disassemble any unit or component of the equipment during operation. Failure to comply will result in an electric shock.

Do not touch the equipment casing, fan, or resistor with bare hands to feel the temperature. Failure to comply may result in personal injuries.

- Prevent metal or other objects from falling into the equipment during operation. Failure to comply may result in a fire or equipment damage.

## Maintenance

DANGER

- Equipment installation, wiring, maintenance, inspection, or parts replacement must be performed only by professionals.
- Do not maintain the equipment with power ON. Failure to comply will result in an electric shock.
- Before maintenance, cut off all the power supplies of the equipment and wait for at least the time designated on the equipment warning label.
- In case of a permanent magnet motor, do not touch the motor terminals immediately after power-off because the motor terminals will generate induced voltage during rotation even after the equipment power supply is off. Failure to comply will result in an electric shock.

## WARNING

- Perform routine and periodic inspection and maintenance on the equipment according to maintenance requirements and keep a maintenance record.

## Repair

DANGER

- Equipment installation, wiring, maintenance, inspection, or parts replacement must be performed only by professionals.
- Do not repair the equipment with power ON. Failure to comply will result in an electric shock.
- Before inspection and repair, cut off all the power supplies of the equipment and wait for at least the time designated on the equipment warning label.

## A WARNING

- When the fuse is blown or the circuit breaker or earth leakage current breaker (ELCB) trips, wait for at least the time designated on the equipment warning label before power-on or further operations. Failure to comply may result in death, personal injuries, or equipment damage.
- When the equipment is faulty or damaged, the troubleshooting and repair work must be performed by professionals that follow the repair instructions, with repair records kept properly.
- Replace quick-wear parts of the equipment according to the replacement instructions.
- Do not use damaged equipment. Failure to comply may result in death, personal injuries, or severe equipment damage.
- After the equipment is replaced, check the wiring and set parameters again.

## Disposal

## AWARNING

- Dispose of retired equipment in accordance with local regulations and standards. Failure to comply may result in property damage, personal injuries, or even death.
- Recycle retired equipment by observing industry waste disposal standards to avoid environmental pollution.

## Safety Labels

For safe equipment operation and maintenance, comply with the safety labels on the equipment. Do not damage or remove the safety labels. See the following table for descriptions of the safety labels.

| Safety Label | Description |
| :--- | :--- |
| $\Delta$ - Read through the safety instructions before operating the equipment. |  |
| Failure to comply may result in death, personal injuries, or equipment |  |
| damage. |  |
| - Do not touch the terminals or remove the cover with power ON or |  |
| within 10 min after power-off. Failure to comply will result in an |  |
| electric shock. |  |

## 1 Unpacking and Transportation

### 1.1 Inspection upon Unpacking

When receiving goods from the shipping company, check that you have received all the items specified on the delivery note. Notify the shipping company immediately of any missing components or damage. If necessary, request the support of Inovance office or your local agent.

After unpacking, check the item lists carefully and confirm that the terminals of the drive unit have been locked firmly to prevent them from falling off during transportation.

1. Carton; 2. Accessory kit; 3. Power supply unit; 4. Expanded polyethylene (EPE)

Figure 1-1 List of power supply unit items

1. Carton; 2. Drive unit; 3. EPE

Figure 1-2 List of drive unit items

## Caution

If the equipment is damaged during transportation, its electrical safety can no longer be ensured. Do not connect the equipment until a thorough high-voltage test has been performed.

### 1.2 Transportation and Handling

The device is compact and light and suitable for manual handling. Handle the AC drive with care. Do not throw or drag the device or step on its package.
Transport the device in cartons. Do not stack the devices over a total height of 1.8 m .

### 1.3 Storage Requirements

Requirements for storage with package:

- When the AC drive is placed near the wall and no passage is left, make sure a distance of at least 200 mm between the AC drive and the wall.
- Never occupy the fire exit and block the safety exit when storing the AC drive.
- Reserve a passage of about 1 m wide in front of the fire hydrant, and do not place the AC drive within one meter in front of the power distribution cabinet.
- When the AC drive packed in a carton is stored outdoors, it must be placed on a pallet and fully covered with rain-proof cloth.
- The AC drive that has been stored for more than 24 hours or underwent severe weather must pass the risk assessment by relevant departments before transshipment and delivery.
- Store the AC drive with care. Never throw it, drag it on the ground, as well as step on the package and operate it.
- During storage, place the large and heavy AC drive at the bottom. The total stacking height cannot exceed 1.8 m .
- The AC drive delivered with the pallet must be placed within the pallet. When there are more than two stacking layers and the overlapping stacking is used, fix the AC drive with the stretch film (do not use the box-sealing tape).

Requirements for storage without package:

- The AC drive must be stored in a clean and dry room, with temperatures between $-40^{\circ} \mathrm{C}$ and $+70^{\circ} \mathrm{C}$ and temperature variations smaller than $1^{\circ} \mathrm{C} / \mathrm{min}$.
- If the AC drive is stored for a prolonged period once it has been unpacked, cover it or take other appropriate measures to ensure that it does not become dirty and that it is protected against environmental influences.
- Pack the AC drive with the original packing box provided by Inovance.
- Do not expose the AC drive to moisture, high temperature, or outdoor direct sunlight for an extended period.
- If the $A C$ drive is stored for a long time (the AC drive is not switched on for more than one year), the electrolytic capacitor must be repaired. Direct power-on of the AC drive may cause damage to the electrolytic capacitor. For the operations of repairing the electrolytic capacitor, see chapter "Storage and Warranty" in the Maintenance and Repair Guide.

## 2 Preparations Before Installation

### 2.1 Installation Procedure

Figure 2-1 Installation flowchart

### 2.2 Installation Environment

To fully utilize the product performance and ensure long-term use, install the AC drive in an environment meeting the following requirements.

Table 2-1 Installation environment requirements

| Item | Requirement |
| :---: | :---: |
| Installation location | Indoor |
| Grid overvoltage | Overvoltage category (OVC) III |
| Temperature | Installation/Operating temperature: <br> - Applications without overload: 1) $-10^{\circ} \mathrm{C}$ to $+50^{\circ} \mathrm{C}$ : without derating; 2) $50^{\circ} \mathrm{C}<$ temperature $\leqslant 60^{\circ} \mathrm{C}$ : the AC drive is derated by $2.5 \%$ for every added $\left.1^{\circ} \mathrm{C} ; 3\right)>60^{\circ} \mathrm{C}$ : not recommended for use <br> - Applications with overload: 1$)-10^{\circ} \mathrm{C}$ to $+40^{\circ} \mathrm{C}$ : without derating; 2) $40^{\circ} \mathrm{C}<$ temperature $\leqslant 60^{\circ} \mathrm{C}$ : the AC drive is derated by $2.5 \%$ for every added $\left.1^{\circ} \mathrm{C} ; 3\right)>60^{\circ} \mathrm{C}$ : not recommended for use <br> Storage/Transportation temperature: $-40^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$ (no freezing) <br> - To improve the reliability of the AC drive, use the AC drive in places without sharp temperature change. <br> - When installing the AC drive in an enclosed cabinet, use the cooling fan or air conditioner to keep the incoming air temperature below $50^{\circ} \mathrm{C}$. Failure to comply may result in over-temperature of the AC drive or even a fire. <br> - Install the AC drive on a flame-retardant surface, and ensure that sufficient space is left around it for efficient heat dissipation. <br> - Avoid freezing the AC drive. |
| Relative humidity | < 95\% RH, without condensation |
| Environment | Pollution degree (PD): PD2 or below <br> Install the AC drive in the following locations: <br> - Free from direct sunlight, dust, corrosive and combustible gases, oil mist, vapor, drip, or salt <br> - Not prone to vibration and away from equipment such as punch presses <br> - Do not install any devices generating electromagnetic waves or interference, such as transformer, around the AC drive. If it is necessary to install such a device, a shielding plate must be added between the device and the AC drive. Otherwise, a malfunction of the AC drive will occur. <br> - The AC drive must be installed in a cabinet that is used in a final system. The system must be equipped with a fireproof enclosure providing both electrical and mechanical protection. The installation must conform to local and regional laws and regulations, and relevant IEC standards. |

| Item | Requirement |
| :--- | :--- |
| Altitude | Star power grid: max. $4000 \mathrm{~m}(13123 \mathrm{ft})$ <br> Delta power grid: max. $2000 \mathrm{~m} \mathrm{(6562} \mathrm{ft)}$ <br> $\bullet \leqslant 1000 \mathrm{~m}(3281 \mathrm{ft}):$ without derating <br> $\bullet>1000 \mathrm{~m}(3281 \mathrm{ft}):$ derated by $1 \%$ for every $100 \mathrm{~m}(328.1 \mathrm{ft})$ <br> increase in the altitude. |
| Vibration | Below $4.9 \mathrm{~m} / \mathrm{s}^{2}$ <br> - When transported in the package: compliant with class <br> 2 M 3 in EN 60721-3-2 <br> • After the package is removed: compliant with ISTA 1H |
| Dust | Compliant with class 3S2 in IEC60721-3 (non-conductive dust) |
| Chemically active <br> substance | Compliant with class 3C2 in IEC60721-3 |
| Shock | Below $19.6 \mathrm{~m} / \mathrm{s}^{2}$ |
| IP rating | IP40 (excluding terminals and fans) |

### 2.3 Installation Tools

### 2.3.1 Mechanical Installation Tools

Table 2-2 Mechanical installation tools

| Tool | Description | Diagram |
| :--- | :--- | :--- |
| Electric drill and <br> drilling bit | Used to drill the mounting <br> holes on the mounting surface <br> during mechanical installation. |  |
| Phillips-head and <br> straight (2.5 mm) <br> screwdrivers | Used to tighten or loosen the <br> screws during mechanical <br> installation. |  |

| Tool | Description | Diagram |
| :---: | :---: | :---: |
| Tape measure | Used to measure the mounting dimensions of the AC drive during installation. |  |
| Gloves | Used to prevent static electricity during mechanical installation. |  |
| M4×12 cross recessed pan head SEMS screws (with flat washer and spring washer) | Power supply unit: 4 PCS per unit <br> Drive unit: 2 PCS per unit Filter unit: 2 PCS per unit | - |
| Wiring tool (standard for the power supply unit) | Used to crimp the cables to terminals. <br> The wiring tool is marked with two current types. 55 A corresponds to the input terminals of the power supply unit, and 30 A corresponds to the output terminals of the drive unit and braking terminals. |  |
| EMC shielded brackets (optional) | The EMC shielded brackets are optional. The bracket for the power supply unit is installed on the input side of the power supply unit, and the bracket for the drive unit is installed on the output side of the drive unit. | EMC shielded bracket for the power supply unit <br> EMC shielded bracket for the drive unit |

### 2.3.2 Cables

Table 2-3 Cables

| Category | Cable <br> Name | Diagram | Category | Cable Name | Diagram |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Main <br> circuit <br> cable | Power <br> cable |  | Control <br> circuit <br> cable | Signal cable |  |

### 2.3.3 Accessory Kit

Table 2-4 Items in the accessory kit

| Name | Diagram | Quantity | Name | Diagram | Quantity | Name | Diagram | Quantity |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Input terminal |  | 1 | Relay output terminal (CN2) |  | 1 | Braking <br> output <br> terminal <br> (BR/+) <br> (applies to <br> models <br> with an <br> optional <br> braking <br> unit) |  | 1 |
| Signal terminal (CN1) |  | 1 | External 24 <br> $\checkmark$ power <br> input <br> terminal <br> (CN6) |  | 1 | Wiring tool (standard for the power supply unit) |  | 1 |

## 3 Installation and Wiring

### 3.1 Mechanical Installation

### 3.1.1 Installing the Power Supply Unit

## Procedure

1. Remove the protective cover on the right side of the power supply unit.

## Note

Keep the removed protective cover. It needs to be installed to the rightmost drive unit.
2. Tighten the four $\mathrm{M} 4 \times 12$ screws at the upper and lower ends of the power supply unit to secure the unit to the sheet metal mounting plate.

## Caution

All retaining nuts must be tightened. Otherwise, the power supply unit may fall off or be damaged due to the unbalanced effect on the fixed part during long-time running.

### 3.1.2 Installing the Drive Unit

## Procedure

1. Align the connector on the left side of the drive unit with the connector on the right side of the power supply unit, and insert the drive unit.

2. Tighten the two $M 4 \times 12$ screws at the upper and lower ends of the drive unit to secure the unit to the sheet metal mounting plate.

## Caution

All retaining nuts must be tightened. Otherwise, the drive unit may fall off or be damaged due to the unbalanced effect on the fixed part during long-time running.
3. Secure all the drive units to the sheet metal mounting plate one by one by repeating Steps 1 and 2.

4. After all drive units are installed, reinstall the removed protective cover on the connector of the rightmost drive unit.

### 3.1.3 Installing Options

### 3.1.3.1 Expansion Card

## Procedure

1. Insert a straight screwdriver into the concaved slot beside the expansion card box and lever the box out towards left.

2. Align the optional expansion card with the slot and push it gently from left to right until it is in position.

### 3.1.3.2 Filter Unit

## Procedure

1. Secure the filter unit to the left side of the power supply unit using two $M 4 \times 12$ screws.

2. Fix the input and output grounding terminals of the filter unit using M4x10 screws (provided for the AC drive).

3. Insert the input and output terminals of the filter unit in turn.

One end of the output cable of the filter unit is connected to the output terminal of the filter unit, and the other end is connected to the input terminal of the drive unit.

### 3.2 Electrical Installation

### 3.2.1 Inspection Before Wiring

- Never perform wiring when the power is on, and keep all circuit breakers OFF. Failure to comply will result in an electric shock.
- After disconnecting the power supplies on the input and output sides, wait for at least the time designated on the product warning label before further operations (such as wiring).
- The user is responsible for ensuring that the motor, cabinet units, and other components are installed and connected in accordance with the recognized technical rules in the country of installation and with other applicable regional regulations. Special attention must be paid to cable dimensions, fuses, grounding, disconnection, isolation, and overcurrent protection.
- If an item of protective gear trips in a branch circuit, a leakage current may have been disconnected. To reduce the risk of fire or an electric shock, you must inspect the current-carrying parts and other components in the AC drive and replace the damaged parts. When an item of protective gear trips, the cause of the trip must be identified and rectified.

### 3.2.2 Wiring

## Procedure

1. Secure the grounding cables to grounding terminals using $\mathrm{M} 4 \times 10$ screws.

2. Crimp the cables to terminals.

Press the wiring tool (shown as the arrow in the following figure) to open the spring clamp of the terminal, and insert the crimped cable into the round hole.

The wiring is as follows.

## Note

- The wiring tool is required for connecting the power supply unit input terminal and drive unit output terminals. The thick side of the tool is used for the power supply unit and the thin side is used for the drive unit.
- The signal terminal, relay output terminal, external 24 V power input terminal, and safe torque off (STO) terminal can be directly plugged in.

3. Insert the input terminal into the power supply unit.

## Note

For models with an optional braking unit, the braking output terminal must be inserted.

4. Insert the output terminals into the drive unit.

## Note

For models with an optional STO terminal, the STO terminal must be inserted.

5. Insert the control terminal, relay terminal, and 24 V power input terminal into the power supply unit.

## Caution

After completing the wiring, snap the wiring tool onto the drive unit output terminal, as shown in the following figure.

### 3.2.3 Wiring with EMC Shielded Brackets (Optional)

If optional EMC shielded brackets are required, the cables used must be multi-core shielded cables and be crimped according to the following requirements.

## Procedure

1. Connecting the power supply unit
a. Remove the $\mathrm{M} 4 \times 10$ grounding screw from the power supply unit, and attach the EMC shielded bracket to the power supply unit with this screw.

b. Insert the input terminal (for the terminal crimping, see "3.2.2 Wiring" on page 22), and attach the input grounding cable to the EMC shielded bracket with one M4x10 screw.

c. Strip the power input cable shield (about 15 mm ), and attach the shield to the EMC shielded bracket with a hose clamp.

d. Insert the control and relay terminals.

e. Strip the control cable shield (about 15 mm ), and attach the shield to the EMC shielded bracket with a $360^{\circ}$ control cable grounding clamp and one M4x10 screw.

2. Connecting the drive unit
a. Attach the EMC shielded bracket to the drive unit with two M4x10 screws.

b. Attach the drive unit grounding cable to the EMC shielded bracket with one M4X10 screw.

c. Insert the drive unit output terminals, and attach the output grounding cables to the EMC shielded bracket with M4x10 screws.

d. Strip the output cable shields (about 15 mm ), and attach the shields to the EMC shielded bracket with hose clamps.

The completed wiring is as follows.

### 3.2.4 Inspection After Wiring

After wiring has been completed, check the items in the following table. Sign the corresponding "Applicable?" column after each inspection.

Table 3-1 Wiring checklist

| No. | Inspection Item | Applicable? |
| :--- | :--- | :--- |
| 1 | The power input cables are connected to the R/L1, S, and <br> T/L2 terminals. |  |
| 2 | The motor input cables are connected to the U, V, and W <br> terminals. |  |
| 3 | The cross-sectional area of the main circuit cables meets <br> the requirements. |  |
| 4 | The heat-shrink tubes have been added to the cores of <br> main circuit cables, and the tubes completely cover the <br> cable conductors. |  |
| 5 | Confirm whether the motor output cables are longer <br> than 150 m (unshielded) or 50 m (shielded). If yes, reduce <br> the carrier frequency (F0-15) and add an output reactor <br> (see the requirements for options). |  |
| 6 | The grounding cables are connected correctly. |  |
| 7 | The AC drive output terminals and control signal <br> terminals are securely connected. |  |
| 8 | The braking resistor and braking unit (if used) are <br> connected correctly and have proper resistance. |  |
| 9 | The control circuit cables are shielded twisted pairs <br> (STPs). |  |
| 10 | The optional cards are connected correctly. |  |
| 11 | If the AC drive is an STO model, confirm that the external <br> 24 V power supply is connected properly. |  |

| No. | Inspection Item | Applicable? |
| :--- | :--- | :---: |
| 12 | The control circuit cables and main circuit cables are <br> routed separately. |  |
| 13 | The protective cover removed from the power supply <br> unit is reinstalled on the connector of the rightmost drive <br> unit. |  |

### 3.2.5 System Grounding

Securely ground each module of the AC drive, including the power supply unit, drive unit, and filter module. Connect the power supply unit, drive unit, input reactor, and filter (or filter module) to the grounding copper busbar of the cabinet in star manner, and connect the output side of the drive unit to the motor, as shown in the following figure.

Figure 3-1 System grounding

| No. | Wiring Description |
| :--- | :--- |
| (1) | Connect the input terminal of the filter module to the power RST input <br> terminal. |
| (2) | Connect the input grounding screw of the filter module to the power <br> grounding terminal. |
| (3) | Connect the output terminal of the filter module to the input terminal of <br> the power supply unit. Use a shielded cable. |
| (4) | Connect the output M4 grounding screw of the filter module to the <br> grounding copper busbar. |
| (5) | Connect the M4 grounding screw of the power supply unit to the <br> grounding copper busbar. |
| (6) | Connect the M4 grounding screw of the drive unit to the grounding <br> copper busbar. |
| (7) | Connect the output side of the drive unit to the motor input side. |
| (8) | Connect the grounding wire of the motor output cable of the drive unit <br> to the grounding screw of the drive unit. |
| (9) | Ground the motor enclosure. |

## Note

In the preceding figure, the power supply unit is equipped with four dual-axis drive units. In the figure, only axis 1 of the rightmost drive unit is taken as an example to introduce the wiring of the drive unit. The wiring for other drive units is similar.

## 4 Commissioning and Trial Run

### 4.1 Basic Commissioning Procedure

Figure 4-1 Basic commissioning flowchart

### 4.2 Commissioning Procedure Under V/f Control

Figure 4-2 Commissioning flowchart under voltage/frequency (V/f) control

### 4.3 Commissioning Procedure Under SVC

Figure 4-3 Commissioning flowchart under sensorless vector control (SVC)

### 4.4 Commissioning Procedure Under PMVVC

Figure 4-4 Commissioning flowchart under permanent magnet voltage vector control (PMVVC)

### 4.5 List of Function Parameters

Table 4-1 List of function parameters of power supply unit

| Para. <br> No. | Add. | Name | Value Range | Default | Unit | Change |

### 4.6 List of Fault Codes

The following faults may occur during the use of the AC drive. Troubleshoot the faults according to the solutions described in the following table.

Table 4-3 Fault codes

| Fault Name | Panel <br> Display | Possible Cause | Solution | Fault Type |
| :--- | :--- | :--- | :--- | :--- |
| STO product <br> model <br> identification <br> error | E01.06 | The hardware is faulty. | Check the AC drive nameplate to confirm <br> whether the AC drive has the STO function. <br> If not, contact the technical support <br> personnel. | Axis fault |
| AC drive axis <br> type <br> identification <br> setting error | E01.07 | The hardware is faulty. | Check the AC drive nameplate to confirm <br> the axis type (single-axis or dual-axis) of the <br> AC drive. | Axis fault |

| Fault Name <br> Panel <br> Display <br> during <br> acceleration | Possible Cause | Solution | Fault Type |  |
| :--- | :--- | :--- | :--- | :--- |
|  |  | The input grid voltage is <br> too high. | Adjust the input grid voltage to the normal <br> range. | Axis fault |
| the motor during |  |  |  |  |
| acceleration. |  |  |  |  |$\quad$| Cancel the external force or install a braking |
| :--- |
| resistor. |
| The maximum rise frequency during |
| overvoltage stall suppression (F3-26) is too |
| low. Adjust it to a value between 5 Hz and |
| 15 Hz when an external force is applied. |$\quad$.

| Fault Name | Panel <br> Display | Possible Cause | Solution | Fault Type |
| :---: | :---: | :---: | :---: | :---: |
| Overvoltage at constant speed | E07.00 | The overvoltage stall suppression parameters are set improperly. <br> An external force drives the motor during running. | Ensure that the overvoltage stall suppression function (F3-23) is enabled. The overvoltage stall suppression voltage (F3-22) is too high. Adjust it to a value between 700 V and 770 V . <br> The overvoltage stall suppression frequency gain (F3-24) is too low. Adjust it to a value between 30 and 50 . <br> Cancel the external force or install a braking resistor. <br> The maximum rise frequency during overvoltage stall suppression (F3-26) is too low. Adjust it to a value between 5 Hz and 15 Hz when an external force is applied. | Axis fault |
|  | E07.01 | The bus voltage of the single-phase AC drive is too high. | Check whether the bus voltage of the singlephase AC drive exceeds 410.0 V . | Axis fault |
| Undervoltage | E09.00 | An instantaneous power failure occurs. | Enable the power dip ride-through function (F9-63). | Axis fault |
|  |  | The input voltage of the AC drive is beyond the specified range. | Adjust the input voltage of the AC drive to the normal range. |  |
|  |  | The bus voltage is abnormal. | Contact the technical support personnel. |  |
|  |  | The power supply unit, the drive board of the drive unit, or the control board of the drive unit is abnormal. | Contact the technical support personnel. |  |
| AC drive overload | E10.00 | The load is too heavy or motor stalling occurs. | Reduce the load and check the motor and mechanical conditions. | Axis fault |
|  |  | The AC drive power rating is too low. | Replace the AC drive with one of higher power rating. |  |
|  |  | The SVC control mode is adopted, and motor auto-tuning is not performed. | Set the motor parameters according to the motor nameplate and perform motor autotuning. |  |
|  |  | The control mode is $\mathrm{V} / \mathrm{f}$ control. | Reduce the torque boost (F3-01) reference in decrements of $1.0 \%$, or set it to 0 (auto torque boost). |  |
| Motor overload | E11.00 | F9-01 (motor overload protection gain) is set improperly. | Set F9-01 correctly. Increase its value to prolong the motor overload time. | Axis fault |
|  |  | The load is too heavy or motor stalling occurs. | Reduce the load and check the motor and mechanical conditions. |  |

| Fault Name | $\begin{array}{l}\text { Panel } \\ \text { Display }\end{array}$ | Possible Cause | Solution | Fault Type |
| :--- | :--- | :--- | :--- | :--- |
| $\begin{array}{l}\text { Input voltage } \\ \text { exception }\end{array}$ | E12.01 | Input voltage phase loss |  |  | \(\left.\begin{array}{l}Check the three-phase power supply and <br>

make sure that it is normal. <br>
Check the input cables and make sure that <br>
they are not broken. <br>
Check the input terminals and make sure <br>
that they are properly connected.\end{array} \quad $$
\begin{array}{l}\text { Power supply unit } \\
\text { fault }\end{array}
$$\right\}\)

| Fault Name | Panel <br> Display | Possible Cause | Solution | Fault Type |
| :---: | :---: | :---: | :---: | :---: |
| Communication fault | E16.01 | Modbus communication timeout | Check whether the Modbus master sends data within the set timeout period. Check whether the RS485 circuit is disconnected or suffers interference. | Axis fault |
|  | A16.02 | The protective cover for the connector is not installed. | Install the protective cover on the connector of the rightmost drive unit. | Axis fault |
|  | E16.03 | Station number allocation fails. | Power on all equipment. If the fault persists, replace the AC drive. | Axis fault |
|  | E16.04 | Continuous frame loss occurs on the extension card. | Ensure that the extension card is connected properly. <br> Check whether F9-67 is set too low. | Axis fault |
|  | E16.11 | CANopen communication timeout | EtherCAT is disconnected. Make sure that the CAN communication cable is connected properly. <br> Check parameters Fd-15 to Fd-17 to eliminate possible interference. | Axis fault |
|  | E16.12 | The PDO mapping configured by CANopen is inconsistent with the actual communication mapping. | The EtherCAT mapping is inconsistent with the PDO mapping. Check the PDO mapping parameters in group AF to make sure that the PDO configuration is correct. | Axis fault |
|  | E16.13 | Data exchange from the power supply unit to the drive unit times out. | Check whether the power supply unit works properly. If the power supply unit is faulty, contact the technical support personnel. | Axis fault |
|  | E16.14 | Data exchange from the power supply unit to the drive unit is abnormal. | The power supply unit is faulty. Contact the technical support personnel. | Axis fault |
|  | E16.21 | CANlink heartbeat times out. | Check that the CAN communication cable is correctly connected. <br> Check parameters Fd-15 to Fd-17 to eliminate possible interference. | Axis fault |
|  | E16.22 | A CANlink station number conflict occurs. | Change duplicate CAN station numbers in the network to different ones by using Fd13. | Axis fault |
|  | E16.52 | The EEPROM of the EtherCAT communication card is faulty. | 1. If the programming or upgrading of the communication card fails, program the communication card again. <br> 2. If this fault occurs during normal use, replace the communication card. | Axis fault |
|  | E16.53 | The slave control chip of the EtherCAT communication card is faulty. | 1. If the programming or upgrading of the communication card fails, program the communication card again. <br> 2. If this fault occurs during normal use, replace the communication card. | Axis fault |
|  | E16.55 | The EtherCAT system parameters are incorrect. | When the master station goes wrong, check whlt Ber it sends the sync frame (FD-78). If not, make sure that TPDO and RPDO have | Axis fault |

| Fault Name | Panel Display | Possible Cause | Solution | Fault Type |
| :---: | :---: | :---: | :---: | :---: |
| Motor autotuning fault | $\begin{aligned} & \text { E19.02 } \\ & \text { E19.04 } \end{aligned}$ | Auto-tuning on the synchronous motor magnetic pole position angle fails. | Check whether the motor is disconnected or output phase loss occurs. | Axis fault |
|  | E19.05 | Auto-tuning on the synchronous motor magnetic pole initial position angle fails. | Increase the synchronous motor initial position angle detection current (F2-29). | Axis fault |
|  | $\begin{array}{\|l\|} \hline \text { E19.06 } \\ \text { E19.07 } \\ \text { E19.08 } \end{array}$ | Auto-tuning on the stator resistance fails. | Ensure that the motor is connected properly. <br> Ensure that the rated motor current (F1-03) is set according to the motor nameplate. | Axis fault |
|  | $\begin{aligned} & \text { E19.09 } \\ & \text { E19.10 } \end{aligned}$ | Auto-tuning on the asynchronous motor transient leakage inductance fails. | The motor is not connected or output phase loss occurs. Ensure that the motor is connected properly or the motor is disconnected from the load. | Axis fault |
|  | E19.12 | The auto-tuning times | The motor is not connected or output phase | Axis fault |
|  | E19.13 | out. | loss occurs. Ensure that the motor is | Axis fault |
|  | E19.14 |  | connected properly or the motor is | Axis fault |
|  | E19.15 |  | disconnected from the load. | Axis fault |
|  | E19.16 |  |  | Axis fault |
|  | E19.17 |  |  | Axis fault |
|  | E19.19 |  |  | Axis fault |
|  | E19.20 | Auto-tuning on the zero | Check the $Z$ feedback signal. | Axis fault |
|  | E19.22 | position angle of the no-load synchronous motor times out. |  | Axis fault |
|  | E19.23 | Auto-tuning on the synchronous motor pole position fails. | Ensure that the rated motor current (F1-03) is set according to the motor nameplate. Decrease the synchronous motor initial position angle detection current (F2-29). | Axis fault |
|  | E19.24 | Auto-tuning on the asynchronous motor transient leakage inductance fails. | The AC drive power rating is too low. Select an AC drive of proper power rating according to the motor power. | Axis fault |
| EEPROM readwrite fault | E21.01 | EEPROM read-write is abnormal. | For parameters written to EEPROM through communication, check the RAM addresses of the parameters. For the RAM address mapping of parameters, see "Parameter Address Rules". <br> If the EEPROM chip is damaged, contact the manufacturer to replace the main control board. | Axis fault |
|  | E21.02 |  |  | Axis fault |
|  | E21.03 |  |  | Axis fault |
|  | E21.04 |  |  | Axis fault |

| Fault Name | Panel Display | Possible Cause | Solution | Fault Type |
| :---: | :---: | :---: | :---: | :---: |
| Motor autotuning error | E22.00 | The stator resistance obtained through autotuning exceeds the allowed range. | Check whether the rated motor voltage and current are correctly set, and set F1-02 (rated motor voltage) and F1-03 (rated motor current) according to the motor nameplate. <br> Perform auto-tuning after the motor stops. | Axis fault |
|  | E22.01 | The rotor resistance of the asynchronous motor obtained through auto-tuning exceeds the allowed range. |  | Axis fault |
|  | E22.02 | The no-load current and mutual inductance of the asynchronous motor obtained through auto-tuning exceed the allowed range. If such an alarm is generated, the AC drive calculates no-load current and mutual inductance based on known parameters, which may be different from the optimal values. | Set motor parameters in group F1 according to the motor nameplate. <br> Before auto-tuning, ensure that the motor has no load. | Axis fault |
|  | E22.03 | The back EMF of the synchronous motor obtained through autotuning exceeds the allowed range. | Ensure that the rated motor voltage (F1-02) is set according to the motor nameplate. Before auto-tuning, ensure that the motor has no load. | Axis fault |

| Fault Name | Panel Display | Possible Cause | Solution | Fault Type |
| :---: | :---: | :---: | :---: | :---: |
| Short circuit to ground | E23.00 | The motor is short circuited to the ground. | Check the motor cables and motor for short circuit to ground. | Axis fault |
|  | E23.01 | A hardware overcurrent fault occurs during short-to-ground detection upon poweron. |  |  |
|  | E23.02 | A hardware overvoltage fault occurs during short-to-ground detection upon poweron. |  |  |
|  | E23.03 | A great risk is detected during short-to-ground detection upon poweron. |  |  |
|  | E23.04 | A lower bridge overcurrent fault occurs during short-to-ground detection before startup. |  |  |
|  | E23.05 | A bus overcurrent fault occurs during short-toground detection before startup. |  |  |
|  | E23.06 | A lower bridge and bus overcurrent fault occurs during short-to-ground detection before startup. |  |  |
| Power supply unit fault | E25.00 | The power supply unit is faulty. | Eliminate the power supply unit faults, such as input phase loss and overtemperature. Check the terminal configuration of the power supply unit. If any one of the following functions is selected, a fault is reported when there is no feedback signal: <br> 1: Operation enable <br> 2: Incoming circuit breaker feedback <br> 3: Auxiliary circuit breaker feedback <br> 4: Residual current device feedback <br> If any one of the following functions is selected, a fault is reported when the terminal is active: <br> 6: Drive unit running prohibited <br> 7: Drive unit coast-to-stop <br> 8: Drive unit stop according to the preset mode | Axis fault |

| Fault Name | Panel <br> Display | Possible Cause | Solution | Fault Type |
| :--- | :--- | :--- | :--- | :--- |
| Accumulative <br> running time <br> reach | E26.00 | The accumulative <br> running time reaches <br> the reference. | Clear the record through parameter <br> initialization. | Axis fault |
| User-defined <br> fault 1 | E27.00 | The signal of user- <br> defined fault 1 is input <br> through the multi- <br> functional DI terminal. <br> The signal of user- <br> defined fault 1 is input <br> through virtual I/O. | Reset. |  |

| Fault Name | Panel <br> Display | Possible Cause | Solution | Fault Type |
| :---: | :---: | :---: | :---: | :---: |
| STO fault | STO | STO1 and STO2 signals are disconnected simultaneously. | Check the wiring of STO1 and STO2. | Axis fault |
|  | E47.02 | STO1 and STO2 signals are disconnected separately. | Check the wiring of STO1 and STO2. | Axis fault |
|  | E47.03 | Undervoltage or overvoltage occurs on the STO circuit. | Contact the technical support personnel. | Axis fault |
|  | E47.04 | The STO circuit input subsystem is abnormal. | Contact the technical support personnel. | Axis fault |
|  | E47.05 | The STO blocking output chip is abnormal. | Contact the technical support personnel. | Axis fault |
| Braking unit fault | E61.01 | The braking transistor is short-circuited at stop. | Check whether the resistance and power of the braking resistor are too low. Check whether the braking resistor is shortcircuited. | Power supply unit fault |
|  | E61.02 | Braking transistor open circuit occurs. | Contact the technical support personnel. | Power supply unit fault |
|  | E61.03 | The braking transistor is short-circuited during running. | Check whether the resistance and power of the braking resistor are too low. <br> Check whether the braking resistor is shortcircuited. | Power supply unit fault |
| Fan fault | E80.00 | The fan is faulty. | Ensure that the fan on the drive unit is connected properly. <br> Ensure that the fan rotates freely. | Axis fault |

| Fault Name | Panel Display | Possible Cause | Solution | Fault Type |
| :---: | :---: | :---: | :---: | :---: |
| Hardware I/O resource loss | A99.01 | The selected DI hardware resource does not exist. | Ensure that the power supply unit and extension cards are firmly installed. Check parameters F4-00 to F4-15 of the drive unit to ensure that no non-existing DI hardware resource is selected. | Axis fault |
|  | A99.02 | The selected DO/RO hardware resource does not exist. | Ensure that the power supply unit and extension cards are firmly installed. Check the DO/RO hardware resources of the drive unit to ensure that no non-existing DO/RO hardware resource is selected. | Axis fault |
|  | A99.03 | The selected AI hardware resource does not exist. | Ensure that the power supply unit and extension cards are firmly installed. Check parameters F4-25 to F4-29 of the drive unit to ensure that no non-existing AI hardware resource is selected. | Axis fault |
|  | A99.04 | The selected DI and DO/ RO hardware resources do not exist. | Ensure that the power supply unit and extension cards are firmly installed. Check the drive unit according to the solutions to A99.01 and A99.02. | Axis fault |
|  | A99.05 | The selected DI and AI hardware resources do not exist. | Ensure that the power supply unit and extension cards are firmly installed. Check the drive units according to the troubleshooting measures for A99.01 and A99.03. | Axis fault |
|  | A99.06 | The selected DO/RO and AI hardware resources do not exist. | Ensure that the power supply unit and extension cards are firmly installed. Check the drive units according to the troubleshooting measures for A99.02 and A99.03. | Axis fault |
|  | A99.07 | The selected DI, DO/RO, and AI hardware resources do not exist. | Ensure that the power supply unit and extension cards are firmly installed. Check the drive unit according to the solutions to A99.01, A99.02, and A99.03. | Axis fault |
